

Master Services Agreement:

MSA number: 2012000000

SCHEDULE A

PRI SERVICE

General

Delivery of any Service described in this Schedule is subject to the signing of the ISP Telecom Inc. Master Services Agreement between the Customer and ISP Telecom Inc. The terms and conditions of the Master Services Agreement shall govern the relationship of the parties and the execution of this Schedule shall be conclusive evidence of acceptance of those terms and conditions.

Service Description

ISDN PRI is a switched digital service that transfers information over the public switched telephone network via a 4-wire physical network configuration, with a full duplex transmission path between either your end-user's Customer Provided Equipment (CPE) an Interexchange Carrier (IXC) Point of Presence (POP) or your Collocation space. Deployment of ISDN PRI requires that the end-user has ISDN-compatible Customer Provided Equipment (CPE). The basic service consists of 23 B Channels and a D Channel with a transmission rate of 1.544 Megabits per second (Mbps). Each B Channel carries user information and the D-Channel is used for signaling. The channel configuration is commonly referred to as 23B+D. No custom calling features are included. Please note that it is not possible to receive collect calling on SIP Services. Other services such as 800, 877, 888, 976, or 900 services may not be available or not operate.

Ordering

Orders will be accepted by email attachment or fax of a signed valid Order and specify the Master Services Agreement number, the Schedule, the quantity, and any further details required from time to time to successfully process your order.
